LOW-COST DRY WIPES

KAIVAC KAIWIPES™

THE PROBLEM

Common touch points and irregular surfaces, like doors, light switches, faucet handles, stair rails, keyboards are high priority areas that should be cleaned thoroughly and frequently. Unfortunately, they're often overlooked or cleaned improperly with traditional tools like towels and rags, which can collect soil and transfer it back to the surfaces being cleaned.

THE SOLUTION

KaiWipes are adaptable to the many different facility cleaning needs. Unlike pre-soaked wipes, KaiWipes are packed dry in the canister. Simply use the wipes as-is, or add your own cleaning solution at a fraction of the cost of pre-treated wipes. The durable, commercial grade fibers are able to accommodate Green cleaning solutions as well as EPA-registered disinfectants*, and everything in between.

Complete your hygienic cleaning program with the ability to quickly and easily address common touch points and irregular surfaces with the simple pull of a wipe. Plus, when wielded in Kaivac's optional belt holster, KaiWipes provide even more convenience for on-the-go cleaning.

*When using an EPA-registered disinfectant, the EPA-registered disinfectant must have label directions for applying the product with a cloth. When using such an EPA-registered disinfectant, you must follow the directions for use.
